Safe Harbor Connectivity Available to Providers for 270/271, 276/277, and 835 Transactions to Comply with CAQH CORE Operating Rules

Information posted November 5, 2014

Safe Harbor is a connectivity option available to providers to enable the safe routing of electronic claims to Texas Medicaid & Healthcare Partnership (TMHP). Effective December 15th, 2014, TMHP will support Message Enveloping Standards, HTTP/S Version 1.1 MIME Multipart, and SOAP + WSDL for the following transactions:

- v5010 X12 270/271 Real time and Batch transactions
- v5010 X12 276/277 Real time and Batch transactions
- v5010 X12 835 Batch transaction

These changes are being implemented to comply with Safe Harbor connectivity Rules 153 and 270 of the Committee on Operating Rules for Information Exchange (CORE), established by the Council for Affordable Quality Health Care (CAQH).

Providers do not have to make any changes on their part and can continue to submit these transactions as they do currently. Providers wanting to utilize Safe Harbor connectivity can refer to the connectivity guides at [www.tmhp.com/Pages/EDI/EDI_Technical_Info.aspx](http://www.tmhp.com/Pages/EDI/EDI_Technical_Info.aspx) for more information on how to do so.

For more information about Safe Harbor connectivity, call the TMHP Contact Center at 1-800-925-9126.
