Effective January 29, 2015, Texas Medicaid & Healthcare Partnership (TMHP) will implement a modification in the Long Term Care (LTC) Online Portal to provide the capability for Nursing Facilities (NFs) to systematically identify residents with specific Preadmission Screening and Resident Review (PASRR) Conditions utilizing the Form Status Inquiry (FSI). This modification will allow NFs to ascertain the number of residents in their facility with specific PASRR Conditions, including, but not limited to, Mental Illness (MI), and/or Intellectual and Developmental Disability (IDD).

The LTC Online Portal will be enhanced to:

- Derive and store the PASRR Condition of NF residents, as indicated by the active PASRR Evaluation (PE)* for the resident at the time of the most recent Minimum Data Set (MDS) Long Term Care Medicaid Information (LTCMI) submission (* an active PE is one that is not in a status of Pending Form Completion or Form Inactivated).

- Provide a capability to search for residents in the NF based on their PASRR Condition, using a new “PASRR Eligibility Type” field in the FSI, when MDS 3.0 or MDSQTR 3.0 is selected as the Type of Form.

- Display resident-based search results when searching for NF residents based on their PASRR Condition.

- Provide the capability to export the resident-based search results to Microsoft Excel™.

When searching using the new “PASRR Eligibility Type” field, the “From Date” and “To Date” are disabled; however, the system will automatically set the date fields to the current date. The search will return all “current residents” who meet the search criteria. Current residents are determined by 3618/3619 forms and/or PASRR Level 1 (PL1) Screening Form fields B0650 and B0655.

The new search field will display to Local Authorities /Local Mental Health Authorities (LAs/LMHAs) who have authority to select MDS 3.0 or MDSQTR 3.0 assessments; however, LAs/LMHAs will not be able to obtain FSI search results.
