

# **EVV Visit Transaction Validation Enhancements for All MCOs**

Information posted July 29, 2019

Effective August 1, 2019, Electronic Visit Verification (EVV) visit transaction validation enhancements will be enabled in DataLogic's Vesta EVV system for program providers who submit EVV-relevant claims to the following managed care organizations (MCOs):

- Amerigroup
- Blue Cross Blue Shield
- Community First Health
- Molina Healthcare of Texas
- Superior Health Plan
- Texas Children's Health Plan
- United Healthcare

These EVV visit transaction validation enhancements will be enabled to help improve data quality and to help program providers prepare for the new claims matching process beginning September 1, 2019.

These enhancements will be performed in the Vesta EVV system prior to exporting of the EVV visit transaction to the MCO payers. Program providers will be notified in the Vesta EVV system of incomplete or incorrect data that require updates based on the DataLogic edits or MCO rejection processing.

Program providers should use the period between August 1, 2019, and August 31, 2019, to correct data in the Vesta EVV system to prepare for the new claims matching process.

For more information about the EVV visit transaction validation enhancements and instructions on how to make updates to information in the Vesta EVV system, program providers can call Vesta customer support at (844) 880-2400 or refer to the Publications section in the Vesta EVV Home Tab.
