Long Term Care Nursing Facility/Hospice Preadmission Screening and Resident Review (PASRR) Webinar Part 2

Question and Answer Session
November 28, 2018
Q) Will this webinar be available after the presentation?
A) Recordings of the webinar will be posted to the Learning Management System (LMS) and to TMHP.com soon. TMHP will send out a provider notification when these are available.

Q) What if the view is different (due to using Simple LTC) and doesn’t show all those selections for DME?
A) This webinar is designed to assist LTC providers with only the TMHP user interface. Simple LTC Support is best-equipped to speak about the differences regarding their user interface.

Q) What Medical Necessity (MN) criteria are automatically checked for on an LTCMI?
A) The Auto MN determination criteria are variable, depending on the information entered on the LTCMI (Long Term Care Medicaid Information) assessment. Therefore, it is important to submit all pertinent information relating to the individual’s condition on the assessment.

Q) We have a patient who is PASRR Positive for Mental Illness (MI) and Intellectual Disability (ID). The Local Authority (LA) came and conducted a PASRR Evaluation (PE) and made the patient PASRR Negative. However, when I try to submit my LTCMI, it says we have not conducted an IDT meeting. We use Simple LTC. When I try to add an IDT, it does not allow me to input one. What do I need to do?
A) If the PASRR Evaluation (PE) is negative, then an IDT meeting is not required. This webinar is designed to support only the TMHP user interface. Simple LTC is best equipped to speak about differences regarding their user interface.

Q) I have a pending denial. The NFSS signature page did not match what was entered in the LTC Online Portal. It was then corrected. Is there an automatic denial after 7 days from the pending denial status?
A) If the request type is CMWC or DME, there is an automatic denial after 14 calendar days if the action required by the pending denial has not been completed. If the request type is Therapy, there is an automatic denial after 7 calendar days. Failure to set the request (PTID status) back to Pending State Review after the requested information has been uploaded will result in the LTC Online Portal (LTCOP) not recognizing that an action has been taken. The 7/14 day timer will run out, and the LTCOP will issue a system-generated denial.

Q) Can a resident enter the facility as PASRR Negative, then become PASRR Positive a few years later? Does the Long Term Care facility just resubmit the PASRR?
A) For MI cases, the NF must complete Form 1012 if a new MI diagnosis is added to determine if a new positive PE is warranted. For ID or DD cases, a new PE must be submitted.

Q) If the Local Authority (LA) has completed the PASRR Evaluation (PE) and determined that the primary diagnosis is dementia, do you still need an IDT meeting?
A) If the dementia is noted as primary in an MI-only PE (as per documentation in the medical records by the physician), an IDT meeting would not be needed as the PE would be negative. However, this would not be the case for a PE submitted for ID/DD and MI if they have dementia listed as primary and the PE is positive for IDD and/or DD.
