

HHSC Electronic Visit Verification (EVV) Aggregator & EVV Portal

EVV Aggregator & EVV Portal

The EVV Aggregator is a centralized database that **collects, validates, & stores** statewide EVV visit data transmitted by an HHSC-approved EVV system.

The **EVV Portal** is an online system that allows users to perform searches and view reports associated with the **EVV visit data in the EVV Aggregator**.

EVV Aggregator & EVV Portal

EVV visit transactions are sent to the EVV Aggregator by the EVV vendor systems.

Electronic visit data is electronically verified.*

If all data elements from the EVV visit transaction **pass validation**, it is accepted into the EVV Aggregator.

If data elements from the EVV visit transaction **do not pass validation**, it is stored in the EVV Aggregator as rejected, and sent back to the EVV vendor system for provider notification.

EVV Claims Matching

The EVV Aggregator **matches EVV claims to accepted EVV visit transactions**.

Data elements from the EVV claim and the EVV visit transaction are used in EVV claims matching.**

After EVV claims matching, all EVV claims are forwarded to the **payer** for final claims processing.

EVV claims **without matching EVV visit transactions** are denied by the payer.

Notifications for the outcome of final claims processing are provided by the payer.

EVV Aggregator & EVV Portal Benefits

The EVV Aggregator improves data quality, which means **less visit maintenance**.

A history trail shows changes to all accepted and rejected EVV visit transactions.

The EVV Aggregator streamlines the process of data validation and EVV claims matching.

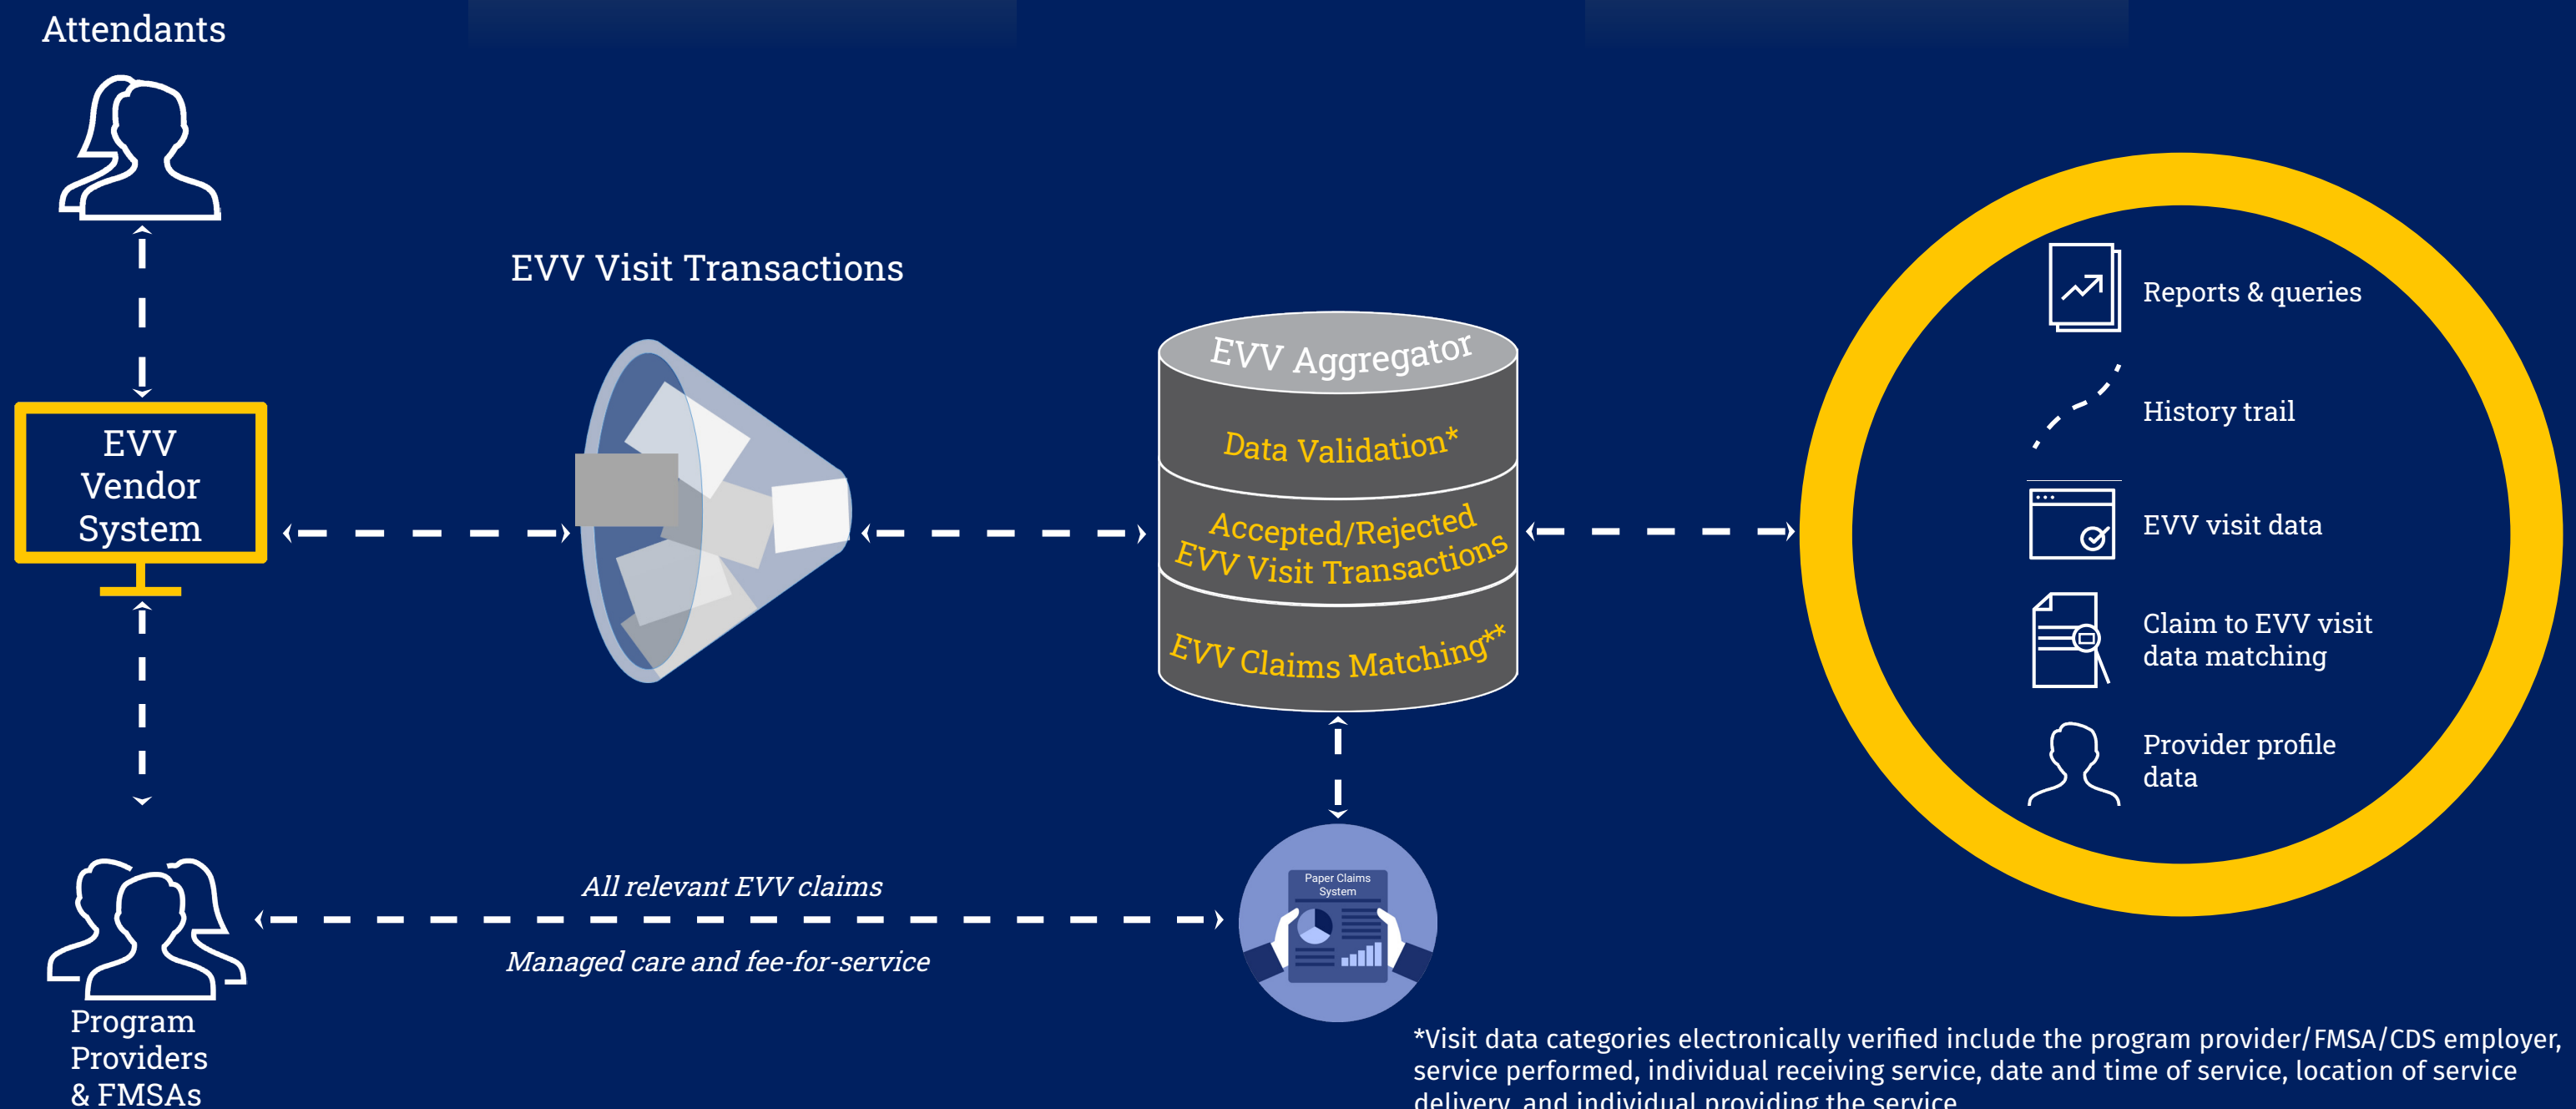

Program providers, FMSAs, MCOs, and HHSC can **search, view, print, and export EVV visit data** via the EVV Portal.

TMHP Role

TMHP is the Medicaid claims administrator for the state of Texas and is responsible for **managing the EVV Aggregator, the claims matching process, and the EVV Portal**.

TMHP is also **responsible for training** program providers, FMSAs, MCOs, and HHSC about the EVV Aggregator and the **use of the EVV Portal**.

TMHP will provide **technical assistance** for all EVV Portal functions.

*Visit data categories electronically verified include the program provider/FMSA/CDS employer, service performed, individual receiving service, date and time of service, location of service delivery, and individual providing the service.

**Data elements for EVV claims matching include Medicaid ID, NPI/API, Date of Service, HCPCS, Modifier, Units.

CDS employers will not have access to the EVV Aggregator or the EVV Portal.
